The purpose of this document is to clearly establish the environmental policy for Sector39. Much of this is also contained in our Governing Document. As an organisation committed to permaculture education and project delivery and development we embrace the ethics, principles and design process as set out by Mollison and Holmgren in their key publications.

Steven Jones, April 2014

environmental policy statement

Sector39 Limited is committed to leading businesses and households in minimising the impact of their activities on the environment.

Further to the above we also seek to lead in finding environmentally beneficial ways of trading and business. We are committed to finding pro-active responses and actions that address the environmental issues of: resource depletion, habitat destruction and accelerating carbon issues driving climate change.

The key points of its strategy to achieve this are:

- Minimise waste by evaluating operations and ensuring they are as efficient as possible.
- Ensuring the recycling, up cycling and re-use of all resources used where ever possible both internally and amongst its customers and suppliers. We seek to eliminate waste
- Avoid all toxic emissions where ever possible through the careful selection and use of transportation and the source of its power requirement.
- Source and promote a product range to minimise the environmental impact of both production and distribution.
- Meet or exceed all the environmental legislation that relates to the Company.
- Transport: we will seek to develop a lift sharing policy and to encourage and support the use of public transport where preferable.
- We are comitted to finding regeneritave solutions to all the above, to restore soils, habitats and to find sympathetic ways to address the ecological damage caused by economic activity.

Signed

Steven Jones

Senior Director, Sector39
