

Case Study Female led house holds, Kisumu district Kenya, Jane Amunga

The people have tried to respond here by making swales and planting on the edges nepiar grass and protect soil erosion.

We are going slow and hope for the best. I wish to visit more and encourage them but I haven't got the transport.

Case Study from Rwanda Women's Permaculture September 2021

They are grateful permaculture technology it has helped with soil. No soil is being taken to the rivers like before. And they say the crops now looks healthy.

Jane Amunga Kisumu district Kenya.
Female led households project.

- Jane and 6 women came to Homa Bay last month for training Jane has done and PDC with S39 and also is supported via Morag Gambol from Permaculture Australia
S39/ Arkleton supported Philis, one of Jane's farmers to attend a PDC run in Kisumu by the permaculture Centre there, here we are seeing some of the results as they apply the ideas to their land. Stella has been to visit to appraise this work and we hope she will again for S39 and Australia.

Surface swale retaining surface water run off and stopping soil erosion. This area can be very arid and dry and this simple measure can be highly effective.
