

Case Study Rwanda Women's Permaculture, Gisagara Rwanda

We have been experimenting with different raised bed designs. We concentrated on using locally available materials, here we used agave cactus to make the sides.

We will work together to plant the seeds and we will share the produce after.

Rose Nibagwire, RWP

RWP group September 2021 at Save School, Gisagara

Case Study from Rwanda Women's Permaculture September 2021

RWP members are designing the land for kitchen garden, they are ready for the activity

The kitchen garden is complete, it is made from fertile soil, manure and sorghum stems (will decompose later) on walls with enough spacing which favors easy plant growth. September to December, Rwanda will have a short rainy season thus we will plant different vegetables on those kitchen gardens for us to have a balanced diet.
